1. USE

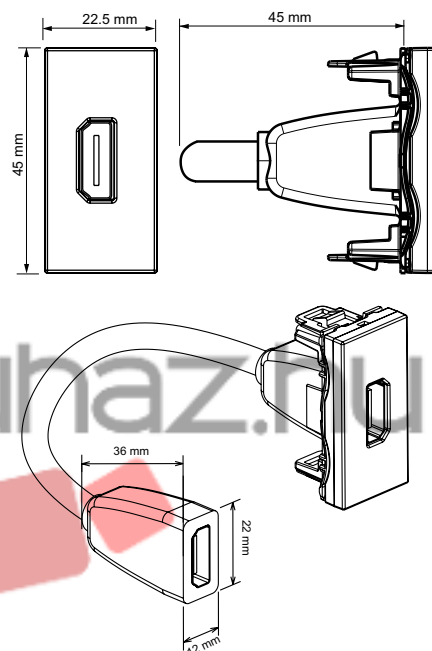

The HDMI socket is an audio-video socket for connecting terminals such as plasma or LCD televisions, home-cinema systems, DVD recorders, satellite demodulators, etc.
The connection is a high-fidelity digital format. To ensure a high-quality result, the connection between the two devices should not exceed a certain distance (see electrical characteristics table). For longer connections, it is necessary to provide a booster system in the installation.
The connectors are type A and conform to the HDMI standard.
